Contents

Foreword xiii
Preface xv

PART I: COMPUTER CARTOGRAPHY 1

1 The Computer and Cartography 3

1.1 The Computer at the Center of Cartography 3
1.2 Stages of Adaptation of the Computer 4
1.3 The History of Computer Cartography 5
1.4 New Display Media 6
1.5 New Cartographic Problems 7
1.6 The Computer’s Influence on Cartography 9
1.7 Benefits of the Computer 10
1.8 Disadvantages of the Computer for Cartography 12
1.9 Some General Trends 12
1.10 Geographic Information Systems 13
1.11 References 14
2 Hardware

2.1 Devices for Computer Cartography 15
2.2 Raster and Vector Display Technologies 27
2.3 Real and Virtual Maps 29
2.4 Workstations for Cartography 30
2.5 References 32

3 Software

3.1 Software Trends 33
3.2 Map Software Characteristics 41
3.3 Types of Software 42
3.4 Software Resources 44
3.5 References 45

PART II: THE REPRESENTATION OF CARTOGRAPHIC DATA

4 Geocoding

4.1 Geocoding and Computer Cartography 49
4.2 Characteristics of Geographic Data 50
4.3 Fundamental Properties of Geographic Objects 52
4.4 Goals of Geocoding Methods 57
4.5 Locational Geocodes 62
4.6 Geocoding Methods 69
4.7 Topological Geocoding 76
4.8 References 80

5 Data Storage and Representation

5.1 Storage Media 81
5.2 Internal Representation 83
5.3 Storage Efficiency and Data Compression 86
5.4 Data Storage Formats for Cartography 92
5.5 References 102
6 Access to Spatial Data 104

6.1 Finding Spatial Data 104
6.2 Using the Internet and FTP 106
6.3 Cartographic Data Transfer Standards 109
6.4 The Spatial Data Transfer Standard 112
6.5 References 113

7 Spatial Data Structures for Computer Cartography 115

7.1 C Language Structures for Cartographic Data 115
7.2 Zero-Dimensional Cartographic Objects 118
7.3 One-Dimensional Cartographic Objects 122
7.4 Two-Dimensional Cartographic Objects 127
7.5 Data Storage and Data Structures 131
7.6 References 132

8 Map Data Structures 133

8.1 Why Map Data Structures Are Different 133
8.2 Vector and Raster Technologies and Data Structures 135
8.3 Entity-by-Entity Data Structures 137
8.4 Topological Data Structures 143
8.5 Tessellations and the TIN 144
8.6 Quad Tree Data Structures 148
8.7 Maps as Matrices 150
8.8 Map and Attribute Data Structures 153
8.9 References 154

PART III : ANALYTICAL CARTOGRAPHY 157

9 Attribute Data Structures 159

9.1 Sequence of Development 159
9.2 Attribute Data Models 160
9.3 Some Attribute Data Models and Structures 165
9.4 Data Structures and Models for Analytical and Computer Cartography 169
9.5 References 169
## Contents

**PART IV: PRODUCING THE MAP**

14 **Designing the Map**

14.1 Symbolization in Context 279  
14.2 The Symbolization Transformation 281  
14.3 Map Use and Analysis 290  
14.4 The Mapping Process and the Computer 291  
14.5 References 292

15 **Cartographic Computer Programming**

15.1 Languages 294  
15.2 Good Computer Programs 297  
15.3 Software Development Methods 299  
15.4 References 303

16 **Writing Cartographic Software**

16.1 The Programming Environment 304  
16.2 The GKS C Language Binding 308  
16.3 Writing Your Own Mapping Program 311  
16.4 Cartographic Software and the User Interface 313  
16.5 References 317

Appendix 318
