

Geog 126: Maps in Science and Society

The History of Quantitative Graphics to 1850

How old are graphs and charts?

The Birth of Quantitative Graphics

- Tied to the emergence of statistical thinking and data collection
- Tied to media
 - Printers, paper, computer screens etc.
- This lecture source mostly from:
- <http://www.math.yorku.ca/SCS/Gallery/milestone/>

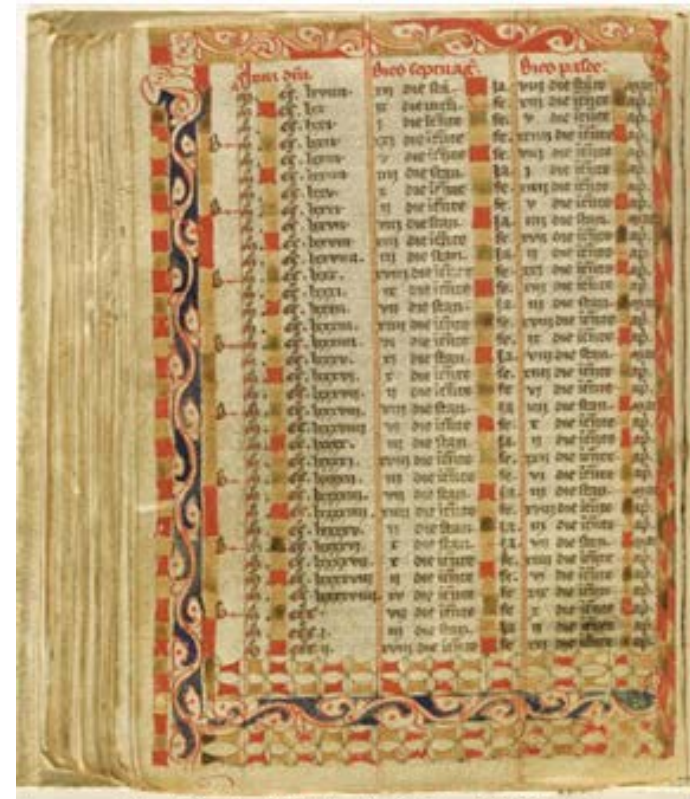

Precise Scientific Observation

- Data graphics are bound to data collection
- Census in Egypt 3340 BC and in 3050 BC
 - Well-developed and precise data collection techniques: Late 1500's

Visual Thinking C13th on

- Diagrams began to accompany mathematical proofs
- Various graphic forms were invented to help communicate numerical / statistical findings e.g. color coding

Manuscript written in 1269 for the Order of Cistercians.

[See more photos](#)

1350: Proto-bar graph

- Nicole Oresme
 - Bishop of Lisieux (1323-1382)
 - French
 - Proposed the use of a graph for plotting a variable magnitude whose value depends on another
 - Implies a coordinate system!
- Before Descartes

top. x flat ed hē

o-fionū duffohg

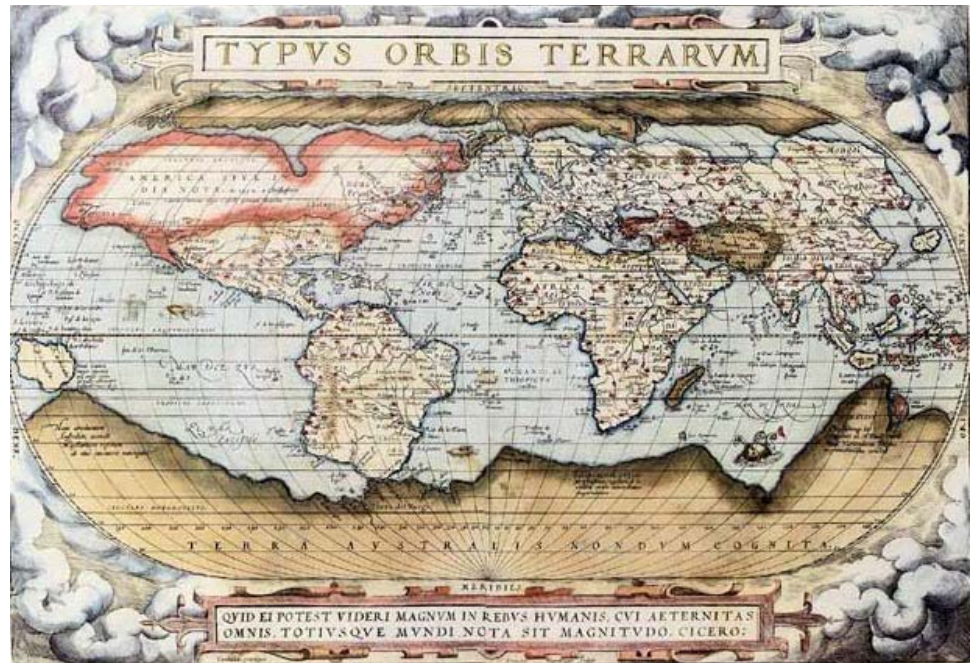

of) or, o-nofia

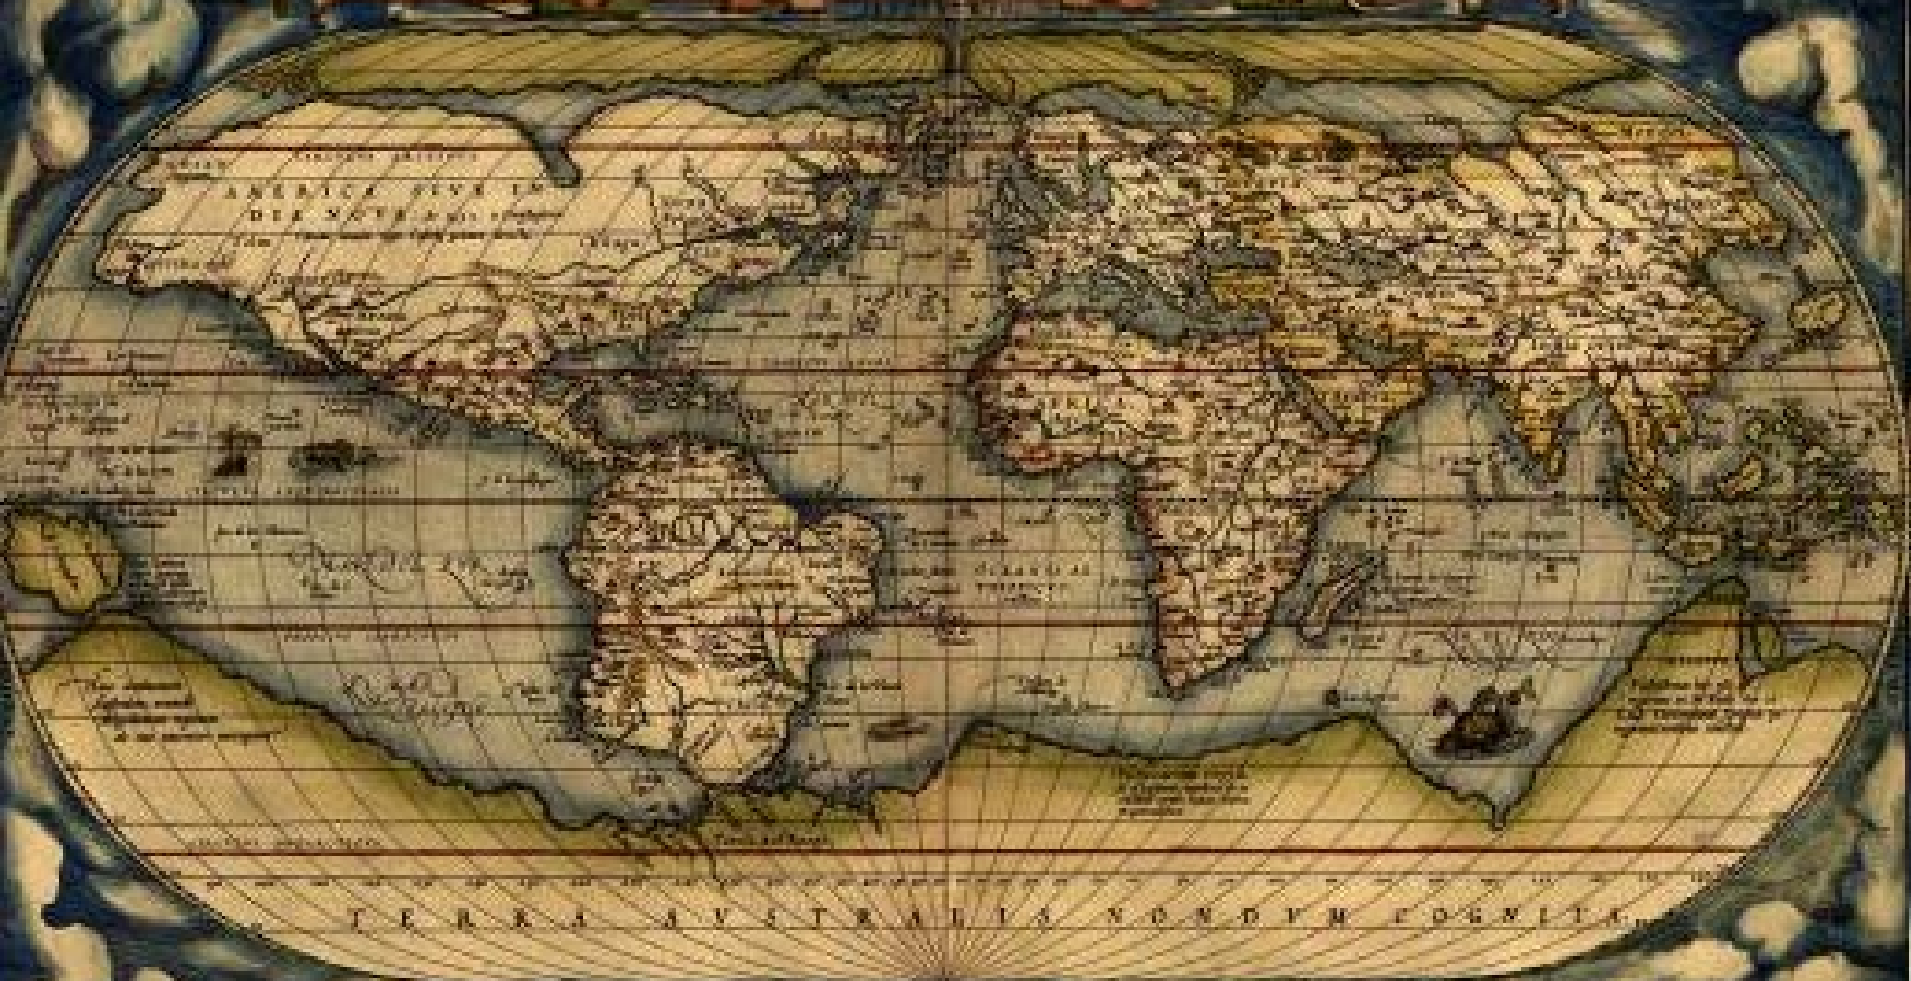

1570: First Modern Atlas

- Theatrum Orbis Terrarum: Text, few data
- Abraham Ortelius, 1527-1598
- Belgian
- Gave credit to cartographers

TYPVS ORBIS TERRARVM

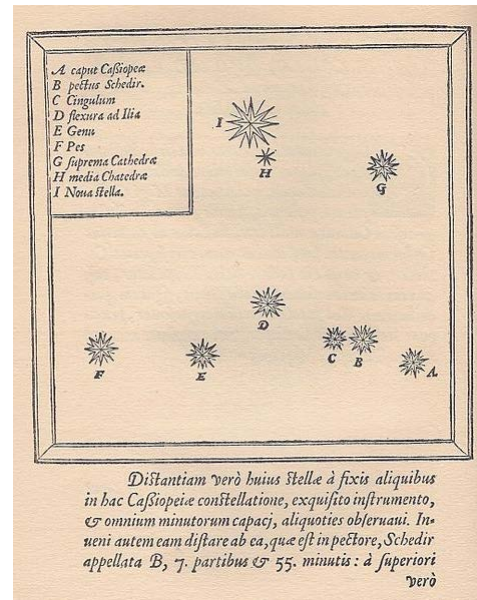

TERRA AUSTRALIS NONDUM COGNITA

QVOD EI POTEST VIDERI MAGNVM IN REBVS HVMANIS, CVI AETERNITAS
OMNIS, TOTIVSQUE MVNDI NOTA SIT MAGNITVDO. CICERO:

1572: Instruments for astronomy

- Tycho Brahe 1546-1601, Danish
- Improved instruments for accurate measurement of stars and planets
- Kept own records and supported observational record keeping

1637: Coordinates reintroduced

- Cartesian Coordinates
- Relationship established between graphed lines and equations
- Rene Descartes 1596-1650
 - French
 - “La Géométrie” 1637

1626: First “Small Multiples”

- Shows a series of images
 - Arranged in a logical sequence
 - Depicts changes over time graphically
- Christopher Scheiner (1575-1650)
 - Italian
 - Changes in sunspots over time
 - Same idea used by Galileo in 1610

MACVLAE IN SOLE APPARENTES, OBSERVATAE anno 1611. ad latitudinem grad. 48. min. 40.

a c, horizon. a b c, arcus solis diurnus. Sol oriens ex parte a, maculas exhibet quas vides, occidens vero c, easdem ratione primj motus, non nihil inuertit. Et hanc matutinam vespertinamq; mutationem, omnes maculae quotidie subeunt. Quod semel exhibuisse et mouisse, sufficiat.

Macula I fuit valde conspicua, propter notabilem pra reliquis magnitudinem.

Figura qua habet antiquum signum X, et Obiter.

Macula M, est haec tenuis vasorum maxima, nulliq; prima magnitudinis sideri fixo cedit.

1686: First Weather Map

- Edmond Halley, 1656-1742
 - English
- Prevailing winds atop a geographic map

18th and 19th centuries: Statistical Thinking

- Numbers, calculations and tables **John Napier** (1550 -1617)
- Leonhard Euler connects to the exponential function in the 18th century.
- Data collection surges
 - People/social stats
 - Medical stats
 - Economic stats
- Need for reporting/summarizing

Napier's Tables

1700's

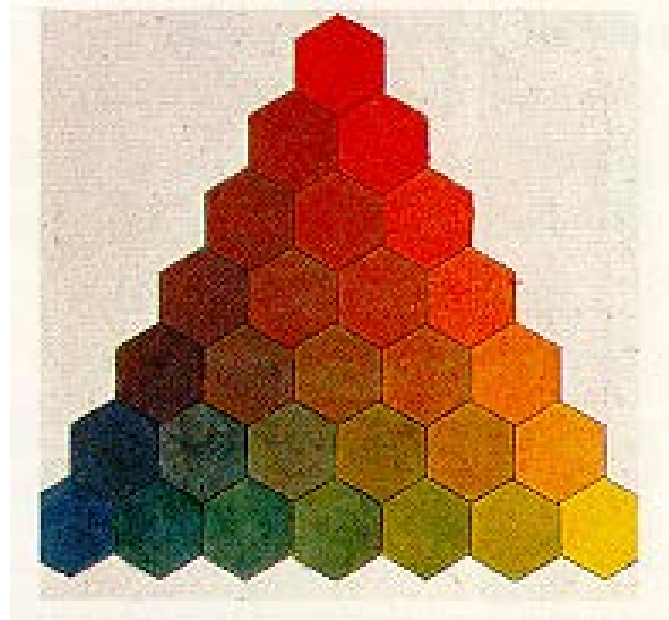

- 1710: Three-color printing invented
- 1748: First use of the word “statistik”
- 1752: Three-dimensional coordinates
(x,y,z)

1758-1772: Color Diagrams

- Diagrams to represent color spaces
- 3D pyramid
- Johann Heinrich Lambert
 - German
- Tobias Mayer
 - German

1782: Proportional Symbols

- First use of geometric figures to compare attributes
- Charles de Fourcroy
 - French
 - Tableau Poléométrique 1782
- Used area of squares to depict urban statistics

TABLEAU POLEOMETRIQUE

Échelle de six Toises de Pied de Roi
 Le Dessin Quarré, ouvert en 78, d'après l'original

1782

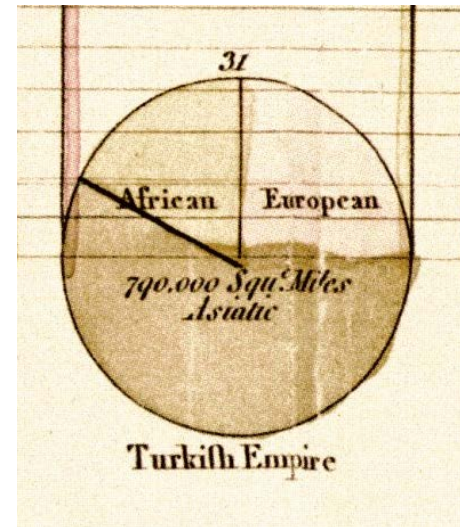

- First topographical map
- Marcellin du Carla-Boniface
 - France

Expression des nivellements; ou,
Méthode nouvelle pour marquer sur les
cartes terrestres et marines les hauteurs
et les configurations du terrain.

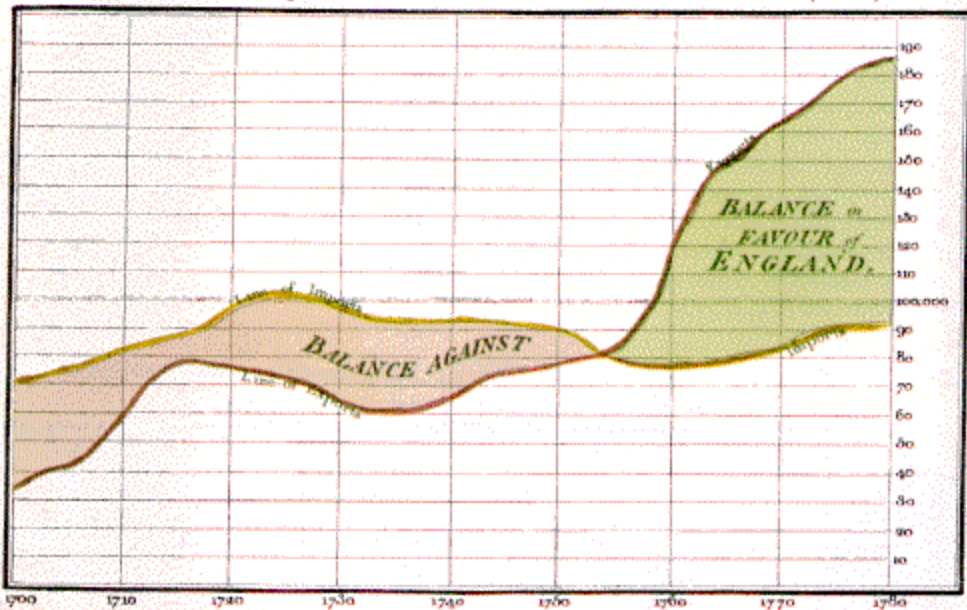

1786: Bar Charts, Line Graphs

- William Playfair (1759 –1823)
 - Huge figure in the world of figures
- First bar charts, line graphs, pie charts (1801)
- Trends in economic data

Exports and Imports to and from DENMARK & NORWAY from 1700 to 1780

The Bottom line is divided into Years, the Right hand line into LI0,000 each.
Published in the Art Magazine of May 1786, by W^m Playfair.
Math. and Phil. Soc. Lond. London.

STATISTICAL REPRESENTATION OF THE UNITED STATES OF AMERICA.

BY W. F. FLEMMING.

The Department of Commerce, Bureau of Economic Warfare, and the Bureau of Census, Washington, D. C.

1798 First maps of the incidence of disease (yellow fever)

Yellow fever in New York, 1797. (*Med. Reposit.*, 1798, 1, opp. 317; cf. n. 30).

"The south-eastern end of Pine-street, (S on plate II.) lies considerably lower than the dock which is continued from it; so that it there keeps a constant puddle of stagnant filthy water and mud. . . . The slips (SS) on each side of this central spot, have been left, during the summer, to be fortuitously filled up by the free contributions of the neighbourhood. . . . But beside all this, the spaces . . . marked S with crosses, particularly that to the north-eastward of the dock, has [sic], from its being open and so contiguous to the Market, become the common convenience to a multitude of people. . . ."

Cases of yellow fever were too numerous "to get an accurate history of them all." This and "the want of proper marks to identify it where it is slight" led Seaman to note only the fatal cases. Ten cases, listed by name, "appear to have originated in East George-street," all but two residing "within the small compass of seventeen houses, in the lower part of the street." Three more cases are listed in Chestnut, Roosevelt, and Water Streets respectively.

Then follow the cases numbered on the map: .1 Kelly/ .2 Wiggins/ .3 Van Deventer/ .4 Hitchcock/ .5 Hamilton/ .6 Comstock/ .7 Rogers/ .8 Beers. One more case (Mowatt) "resided in a healthy, cleanly part of the town: and how or where he could have taken the disease is still a mystery."

Using dots and circles to show individual occurrences in waterfront areas of New York

Valentine Seaman (1770-1817), USA

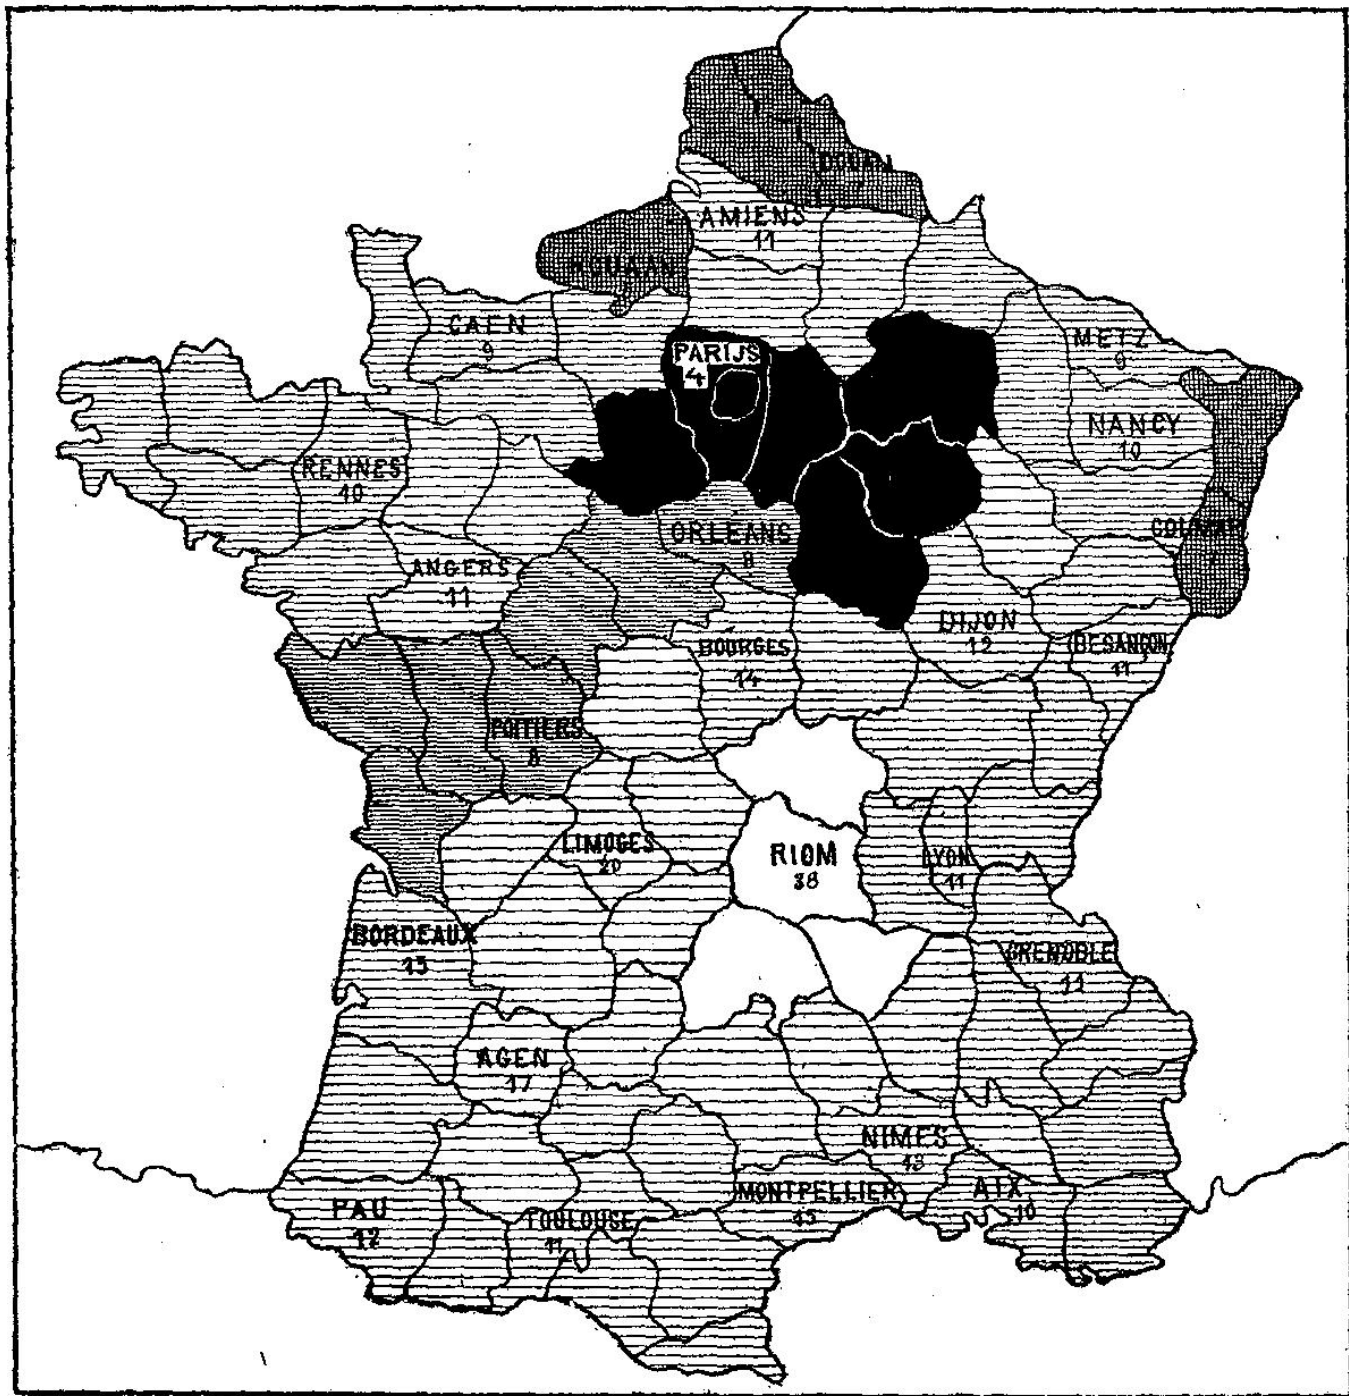

1827: First Successful Photograph

- 8-hour exposure
- Joseph Nicephore Niepce
 - French
 - Point de vue du Gras

1819: First Choropleth Map

- Baron Pierre Charles Dupin 1784-1873
 - French
- Unclassed choropleth map of illiteracy
- First “modern statistical map”
- Social movement of “moral statistics”

1829: Polar-(Radar) charts

- Show frequency of cyclic phenomena
- Andre Michel Guerry 1802-1866
 - French
 - Lawyer and amateur statistician.
 - Together with Adolphe Quetelet founded moral statistics
 - Led to criminology, sociology and ultimately, modern social science.

Liaison des variations météorologiques avec les phénomènes physiologiques.

Isotherms of the northern hemisphere

Physikalischer Atlas

Francis Galton (1822-1911)

- **1861** The modern weather map, a chart showing area of similar air pressure and barometric changes by means of glyphs displayed on a map
- Created idea of correlation and regression
- Pioneered social surveys and study of human differences

William Smith (1769–1839), England

Drawn 1801, published 1815

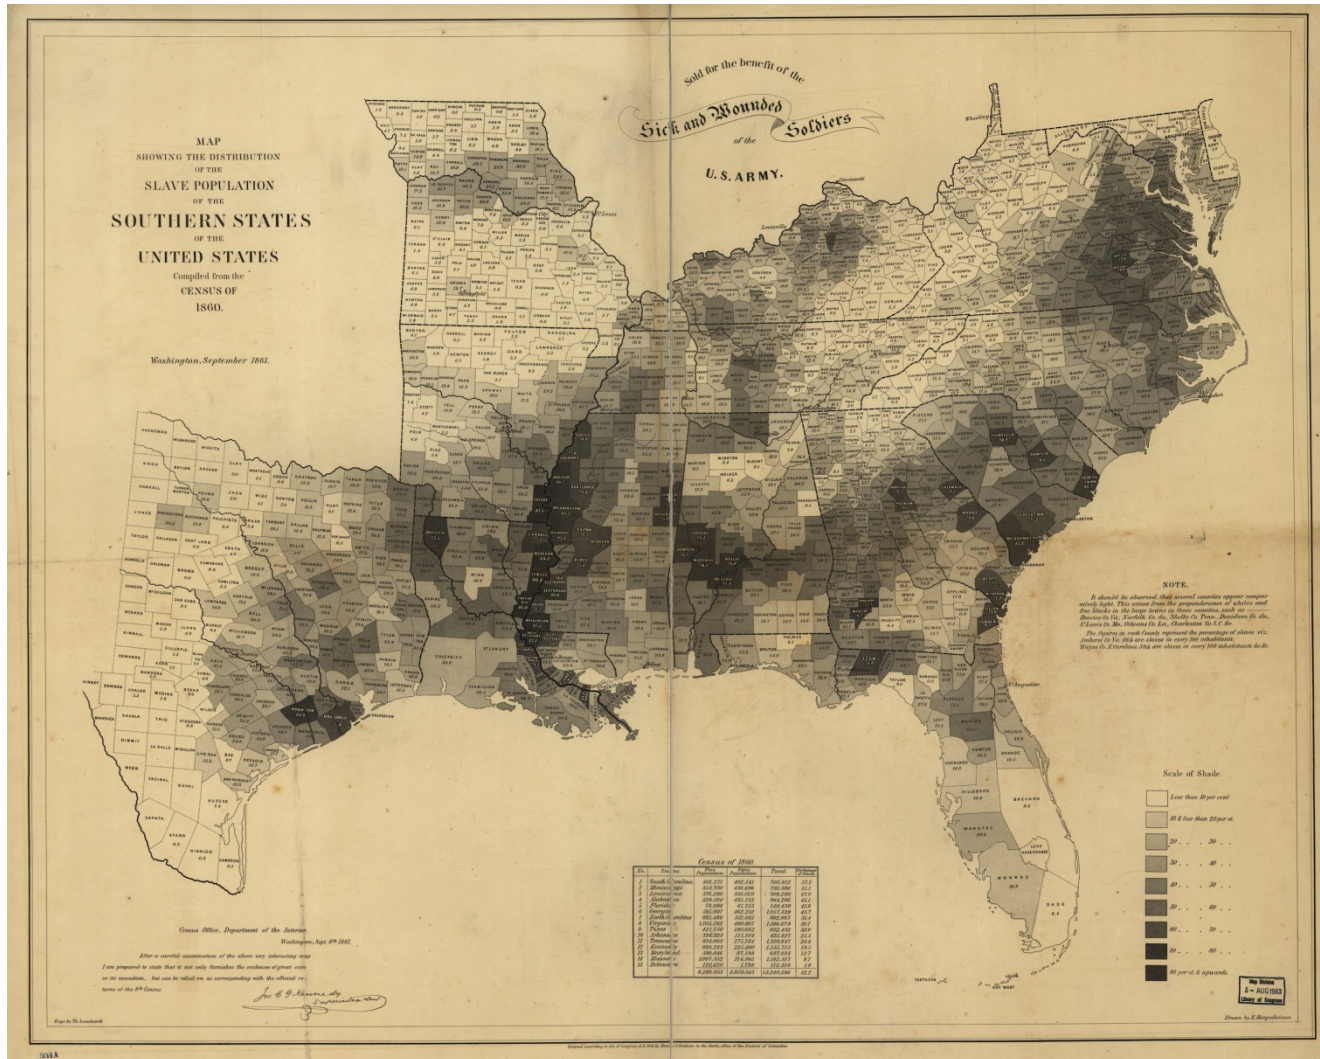

Booth's Atlas of London 1898-99

See: <http://phone.booth.lse.ac.uk/>

	BLACK: Lowest class. Vicious, semi-criminal.
	DARK BLUE: Very poor, casual. Chronic want.
	LIGHT BLUE: Poor. 18s. to 21s. a week for a moderate family
	PURPLE: Mixed. Some comfortable others poor
	PINK: Fairly comfortable. Good ordinary earnings.
	RED: Middle class. Well-to-do.
	YELLOW: Upper-middle and Upper classes. Wealthy.

Principal Winds which prevailed in Phare de Cordouan during the year 1842.
Principaux Vents qui ont régné au Phare de Cordouan pendant l'année 1842.

Les longueurs des lignes à partir du Centre de la Rose de Vents ci-dessus sont proportionnelles aux nombres de jours pendant lesquels les Vents ont soufflé.
The lengths of the lines from the Center of the Compass above are proportional to the numbers of days during which the Winds blew.

July Dupon et Desobry, A.P. P. Paris & Rouen.

Infographic Émile Levasseur (1828-1911), France

Since the mid-19th Century

- Rise of professional societies
- Attempts at symbol standardization
- Widespread use in science
- Increased use in government, especially for social issues e.g. public health
- Origins of computing in Hollerith cards
- Ideas appear in textbooks, comparisons made

International Map of the World

Millionth map

- Idea suggested by German Geographer Albrecht Penck (1858-1945) at the Fifth International Geographical Conference in 1891.
- Project begun in 1913 to create a complete map of the world according to internationally agreed standards
- Interrupted by WW1
- Central Bureau of the Map of the World established at the Ordnance Survey in London
- Archives partly destroyed by WWII German bombing
- After the Second World War, the United Nations took over the project, but interest waned
- Only 800 to 1,000 of 2,500 planned maps were completed.
- Officially abandoned in the early 1980s

Australia: Maps coded using grid

Rediscovery in cartography

- Scientific visualization
- GeoViz
- InfoViz
- Spatialization
- Data mining
- Network theory

continuous density surface (from points)

stepped density surface (from voronoi polygons)

pycnophylactic reallocation (Tobler, 1979)

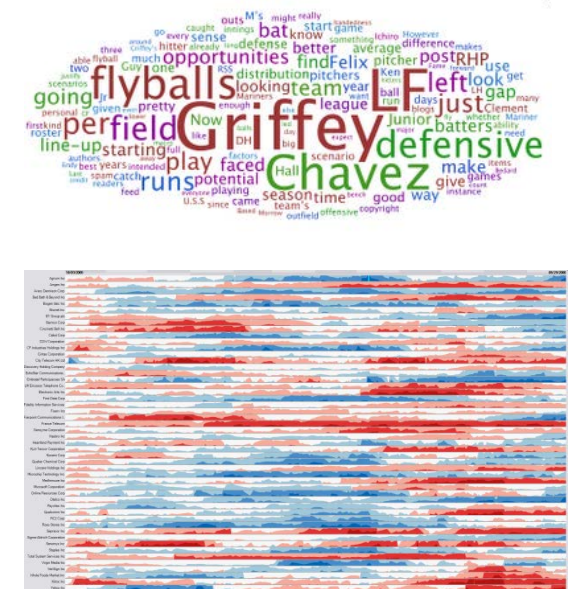

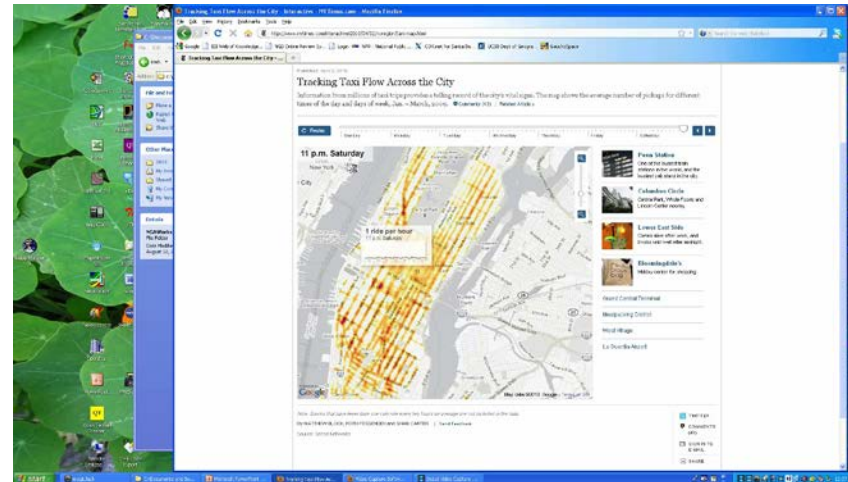

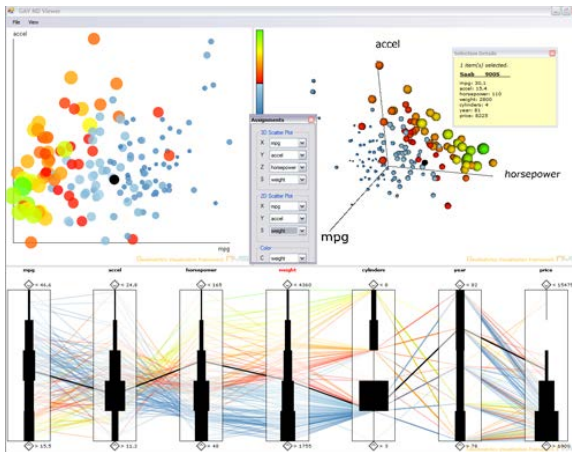

pycnophylactic surface

3D Printing/Laser scanning

Summary

- Medieval origins of simple statistical graphics
- Close link to astronomy
- More rediscovery, e.g. Descartes
- Most modern methods have origins from 17th-19th century
- Playfair an important pioneer
- Berghaus pioneered rise of thematic Atlas
- Rediscovery as visual analytics/geovisualization, but far better tools!
