Earth Liberation Front Claims Responsibility For Torching Genetic Engineering Program In California

UGENT NEWS ADVISORY
February 25, 2001

D&PL are responsible for the Monsanto Corporation's controversial terminator seed technology. This program renders seeds sterile forcing farmers to purchase seeds annually from Monsanto. These seeds also have been proven to pass sterile genes onto wild plants through cross-pollination threatening biodiversity.

A communique sent by the E.L.F. stated, "We chose this warehouse because it contained massive quantities of transgenic cotton seed in storage. But now, this seed will no longer exist to contaminate the environment, enrich a sick corporation, or contribute to its warped research programs."

The E.L.F. is an international anonymous organization that uses direct action in the form of economic sabotage to stop the systematic exploitation and destruction of the natural environment.

The communique continued, "D&PL continues to pursue its 'Terminator technology' despite global opposition to the genetic engineering of plants to produce sterile seeds. Engineering a suicide sequence into the plant world is the most dangerous new technology since nuclear power and needs to be stopped."
Since 1997, in the United States alone, the E.L.F. have caused near $40 million in damages to entities profiting off the exploitation and destruction of the natural environment.

The communique finished by stating, "We are the burning rage of a dying planet. Earth Liberation Front (ELF). ...Terminate D&PL, cremate Monsanto, burn biotechnology..."
