Special Issue
Integrating GIS and Environmental Modelling

Editorial. K. C. Clarke 353
Guest editorial. J. Wilson 355

Research Articles
Development of a geomorphological spatial model using object-oriented design. J. Raper and D. Livingstone 359
Interpolating mean rainfall using thin plate smoothing splines. M. F. Hutchinson 385
Topographic solar radiation models for GIS. R. Dubayah and P. M. Rich 405
Modelling spatially and temporally distributed phenomena: new methods and tools for GRASS GIS. H. Mitasova, L. Mitas, W. M. Brown, D. P. Gerdes, I. Kosinovsky and T. Baker 433
Quantifying septic nitrogen loadings to receiving waters: Waquoit Bay, Massachusetts. C. H. Sham, J. W. Brawley and M. A. Moritz 463
Evaluating field-based GIS for environmental characterization, modelling and decision support. S. Carver, I. Heywood, S. Cornelius and D. Sear 475
Editorial

This special issue is the outcome of the Second International Conference/Workshop on Integrating GIS and Environmental Modelling, held in Breckenridge, Colorado in September 1993. This was a conference enjoyed and enthused over by many of those attending. It focused discussion on a large number of innovative and exciting issues which relate to topics regarding the broadest aspects of geographical information systems as well as specifically, and naturally, to environmental issues.

The conference was an undoubted success and that is largely due to the organizers at the NCGIA, and especially Mike Goodchild and the conference coordinator Saudi Glendinning. John Wilson took on the role of editor of this special issue and I wish to put my thanks on record, he has acted independently throughout, selecting papers from the conference, organizing peer reviewing, and editing the papers.
